cbe(9223372036854775807) I want to separate the text in this line to create this output: 411cbe I tried to use PHP preg_match_all but I didn't find a good solution for that. I would like to learn how to do it. Thanks a lot for your help. A: There are a few ways to achieve this, but this is the most basic preg_match('/\d+/', \$str, \$matches); And then you can print out the result like: print_r(\$matches[0]); Here's a live example: Lines of Acherontia viridipes (Trichoptera: Hydroptilidae) and the use of cloth nets for insect surveys in virgin rainforest in the Jaba Mountain Range of Ecuador. Insect nets made of fine nylon twine were used in a survey of the hydroptilid fly Acherontia viridipes (Nees, 1811) in the Jaba Mountain Range, Ecuador. Lines of net were deployed in three rainforest sites at the following elevations: 110 m, 190 m, and 100 m above sea level, for 11 nights each between January 1 and July 10, 2007. Samplings occurred every night from 16:00 to 22:00. In total, 1,965 specimens of A. viridipes were collected. One-hundred percent of specimens were captured by the nets deployed at 110 m and 100 m and by the lowermost net at 190 m. In all, the net lines obtained 69,600 total specimens, and the mean individual catches per hour were 118.0 specimens/hour at 110 m, 22.3 specimens/hour at 190 m, and 3.8 specimens/hour at 100 m. During the study, only three A. viridipes were collected by other methods (litter sifting). In addition, most specimens were collected at nights between 22:00 and 04:00, showing that A. viridipes may be most active during this time period. Despite this apparent preference for late night, daytime activity was observed in both diurnal and nocturnal species. This study shows the efficiency of the nets in terms of species diversity and numbers, and the presence of large numbers of specimens in the nets suggests that this method 82157476af
